

透气带系列 Air Slide Fabric

新型透气层适用于粉、粒状物料的气动输送装置，水泥、氧化铝等粉料气动输送槽。利用该装置的气动输送装置和气化床装置已在冶金、建材、化工、电厂、食品和交通运输业中得到广泛应用，取得了良好的效果。由于物料在运输过程中呈气化状态，设备不受摩擦损坏，减少了设备的维修量。同时物料在密闭的溜槽中输送，保证了环境不受污染。

We offer a comprehensive range of poly airslides for the use of air gravity conveyors.

Air gravity conveyors are used to move dry particle materials in a variety of industries such as cement, detergent and transportation (bulk haulers, barges). Our products are semi-permeable (allow air to pass through, but not product) and are manufactured to meet specific permeation ranges ensuring that uniform volumes of air are allowed to pass through, given standard air pressure. Polyester airslide is manufactured in 2-5 ply from durable and abrasion-resistant polyester fabrics. Airslide fabrics and airslide pads are formed an integral part of pneumatic conveyor systems.
